## **Integrated** solution for smart retailer

## SMS Gas Pump Management Does More Today with Customer Loyalties Integration.

SMS market studies showed a need for a real integrated retail system with Gas pump interface. To meet this exploding demand, we've added more features to our integrated pump application to maintain our leading edge in the retail market.

The SMS Gas pump management Application offers a fully integrated system that will allow management of your fuel transactions to its full potential. You can now control all your pumps from any designed POS. From one to many registers, you will be able to authorize all your exteriors pumps by the push of a button. The interface will give the user the status of each connected pump. While customers are pumping gas, the screen will reflect the volume bought in real time. The userfriendly SMS Gas pump management tool screen proposes the flexibility of programming any SMS function to the push of a button, making it easy to learn. If you are running a business on a 24-hour shift, the pre-pay function is an important feature that has been integrated to make your life easier...

The SMS gas management application will control your Price booking at store level or at central host level using all the standards. SMS has unique pricing capacity that will allow the operator to drive sales of In-store items. For example: buy 25 \$ of fuel with a coffee and a muffin and get the coffee free. Buy over 30 \$ of fuel and get a special price on all complementary items such as oil, windshield-washing fluid, etc. For more information on our shopper loyalties program, see our Frequent Shopper brochure.

SMS Gas will help you manage your organization according to your specifications. You may decide to have all pumps set-up as a self-service or as a full service. SMS has the flexibility of letting you choose to set 50% of your pumps self served or fullserviced, at different price ranges. Our user-friendly interface makes the SMS Gas effortless to switch from one mode to the other giving the flexibility you are looking for.
